

Classic HVG High Volt Pulsed Digital Galvanic Stimulator

Product Description

This Classic HVG high voltage galvanic stimulator is used for the symptomatic relief and management of chronic (long-term) intractable pain. The electronics of the Classic HVG create electrical impulses whose Intensity, Pulse rate; Modulations and Compliance timer may be altered with the controls/switches. Press buttons are very easy to use and the large liquid crystal display shows the exact mode and values of the mode parameters being used. Total treatment is 40 minutes, 3 times per day for 2 days period.

Product Feature

- Display will show all chosen function and indicating the condition
- Programmable units with total capabilities
- With timer and memory
- Time use memory
- Timer programmed with count down display
- Auto shut down whilst remembering last setting
- Digital display all functions
- Easy to use controls

Product Specification/Models

- Power Source: one 9 V DC battery
- Channel: single Channel with 2 active leads and 1 dispersive lead
- Wave form: twin peaked monophasic spike
- Mode: 5 therapeutically modes
- Low battery indicator: indicate symbol by weakness of the battery
